DETAILED ACTION

Specification

The amendment filed 2/4/02 is objected to under 35 U.S.C. 132 because it introduces new matter into the disclosure. 35 U.S.C. 132 states that no amendment shall introduce new matter into the disclosure of the invention. The added material which is not supported by the original disclosure is as follows: the amendment to the specification at pages 7,10,14,23,25,27. It is unclear from the amendment what text was added or deleted by the amendment. Applicant must provide a marked up copy of those pages amended showing both the added and deleted material.

Applicant is required to cancel the new matter in the reply to this Office Action.

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 1-11,22,24-26,33-37,48, are rejected under 35 U.S.C. 102(b) as being anticipated by USP 5,92,603 (Dunkelman et al.).

Figures 1 and 2 illustrate the embodiment which is considered to read on the claimed device. The device is disclosed for the sterilization, seeding, culturing, storing, shipping, and testing of vascular grafts. Specifically, the patent describes an apparatus and method for sterilizing vascular grafts and then seeding and culturing the grafts with human cells, resulting in grafts populated with viable human cells (col.1, lines 13-18).

Art Unit: 1744

Figure 1 shows a vascular graft (26), a reservoir (10) containing culture medium, a pump (16) on one end of the graft (26) and a pump (12) on the other end of the graft (26). The pumps force fluid out of the reservoir (10) through pump (12) into chamber (14) through outlet (30) into flow line (22). Pump (16) urges fluid in the same direction through line (24) into the vascular graft (26) and out of the chamber (14) and through outlet (30) into flow line (22). The pump (12,16) are controlled by timers.

Claims 1-11,22,24-26,33,35-37,48, are rejected under 35 U.S.C. 102(b) as being anticipated by USP 5,792,603 (Dunkelman et al.).

The Dunkelman et al. patent discloses a device similar to the claimed invention as illustrated in figure 3. Figure 3 shows a pump (36) connected to a flow line (37) connected to a venturi tube (38) which is in flow communication with a treatment chamber (22) containing a vascular graft (24). The venturi tube is considered to be equivalent to a second pump in acting to push or pull fluid through the graft (24).

Allowable Subject Matter

Claims 12-21,34,38-47, are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

Claims 27-32,49-54 are considered to be allowable over the prior art of record.

As allowable subject matter has been indicated, applicant's reply must either comply with all formal requirements or specifically traverse each requirement not complied with. See 37 CFR 1.111(b) and MPEP § 707.07(a).

Art Unit: 1744

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. The remaining prior art references are generally related to the claimed invention.

Applicant is requested to provide copies of the non-patent references cited in the specification since they are not readily available to the examiner.
